47.3 MUD LOSS — BARAIL SANDSTONE (17 m BELOW TOP)

Reported by: Driller · Reviewed by: Petrophysicist · Logged 04 NOV 2019

Drilling resumed at 13.1 m/hr.
Losses cured after 3.5 hrs; total mud lost 12 m³.
pill was spotted across the loss zone.
Flow rate was reduced by 10% and a 40 ppb LCM
Cuttings showed fractured, coarse-grained sand.
Barail, partial losses of 45 bbl/hr were observed.
At 3,061 m MD (3,021 m TVDSS), 17 m into the
9⅝-in shoe with KCl-polymer mud at 1.38 g/cm³.
Well W-067 was drilling the 8½-in hole below the

REMEDIAL ACTION

LCM pill mixed at 40 ppb and spotted across the loss zone; flow rate reduced by 10 %.
Losses cured after 3.5 hours. Total mud lost 12 m³. Drilling resumed at 13.1 m/h.
Cuttings confirmed fractured, coarse-grained Barail sandstone; no change to programme.
